RSNA Diagnosis Live™

▸ WHAT IS RSNA DIAGNOSIS LIVE™?

RSNA Diagnosis Live™ is a an interactive tool that uses gaming technology to enhance learning retention, thereby making radiology courses fun and rewarding. Participants use their devices to instantly submit answers and enjoy friendly competition while sharpening their skills.

Diagnosis Live has unique and exciting capabilities. Users may create engaging, mobile-friendly game presentations comprised of multiple choice or touch responses. Students then reply via their devices, which allows presenters to see immediate results. Later, students and presenters can review results and analytics together.

▸ HOW WILL THIS HELP OUR RESIDENCY PROGRAM?

Diagnosis Live is an interactive teaching tool that helps students engage in learning. Students respond to questions on their own devices and may be assigned to teams, which encourages active participation in a competitive gaming atmosphere.

Presenters receive immediate feedback via real-time analytics throughout the presentation. Presenters can review data to see how well students understand the content, identify which areas of the lecture need more attention and assess if one class is performing better than another. After the presentation, students can return to the site to receive detailed information that includes their overall score and a comparison of their answers with other student responses as well as an opportunity to review the questions and answers.

▸ WHAT IS THE COST?

There is no fee to acquire a license to use Diagnosis Live for radiology residency programs. RSNA values the ongoing support we receive from our partner institutions and this is one way in which we give back to the residency programs developing the next leaders in the field.

▸ WHAT SOFTWARE OR ELECTRONIC EQUIPMENT DO PRESENTERS AND STUDENTS NEED TO USE DIAGNOSIS LIVE?

No special equipment is needed. Presenters create a presentation in PowerPoint (2007 or higher), Keynote or Google Slides (save file as .pptx) and then run the course on a device. Students use their mobile devices to respond.

View our technical requirements for more information or access them at *RSNA.org/Diagnosislive*.

▸ HOW DO I BUILD A GAME?

It's easy to create a Diagnosis Live presentation. Start by uploading your existing presentation to the Diagnosis Live site. (PowerPoint, Keynote, and Google Slides are supported). Then, use the online tools to create and test your multiple choice and image-based "touch" questions. For added excitement, assign point values to your questions and create teams. Once your institution is set up with an account, the Diagnosis Live team is available to help answer any questions you may have.

▸ ARE OUR INSTITUTION'S GAMES PRIVATE?

There are three levels of privacy for presentations in Diagnosis Live:

- **Private:** only you and the people you invite can see the game.
- **Institution:** anyone at your institution who is assigned access rights by an administrator can see the game.
- **Public:** everyone can see the game, including people outside your institution.

▸ WHAT TYPES OF PERMISSION LEVELS ARE AVAILABLE FOR USERS?

The designated administrator from your institution will assign your institution's users with one of three permission levels:

- **Administrators:** may assign/change permission levels, access/edit any authored game and view student results.
- **Faculty:** may author games, invite players and view student results for only those authored games.
- **Students:** may play games and view their own results.

▸ WHAT ARE THE NEXT STEPS AFTER I SIGN UP?

Once an online request form has been submitted, the Diagnosis Live team will provide your institution with a license agreement to complete.

After the agreement is finalized by RSNA, invitations are sent from the Diagnosis Live system. Once invitations are accepted by the administrator, the Diagnosis Live experience can begin. Administrators will also receive links to user guides and tutorial videos.

▸ HOW DO I GET ADDED AS A USER IF MY INSTITUTION IS ALREADY SIGNED UP?

Notify your program's Diagnosis Live administrator to request an invite to use the software. If you don't know who the administrator is, contact the Diagnosis Live Team for assistance.
