

Breast Radiology Entrustable Activity Supervision Tool

This research was supported by an [RSNA Research & Education Foundation](#) grant.

Trainee Resources:

Each Entrustable Professional Activity - Breast Radiology (EPA-BR) outlines key functions trainees must perform to show mastery of the EPA, and includes links to educational resources (articles, videos, interactive PowerPoints) to build their fund of knowledge.

- **Breast Imaging EPAs:**
 - [EPA1a: Screening Mammography](#)
 - [EPA 1b: Screening US](#)
 - [EPA 1c: Screening MRI](#)
 - [EPA2: Diagnostic imaging](#)
 - [EPA3: Biopsies](#)
 - [EPA4: Evaluating patients with new or previous Breast Cancer](#)
 - [EPA5: Image-guided Localization](#)
- **What is an Entrustable Professional Activity (EPA)?** [EPA Basics](#)

Background Information

- **Why create EPAs for Breast Imaging Radiology (EPA-BRs)?** To provide a guide and learning tool for trainees that can supplement training at their own institutions
- **How were EPA-BRs created?** A group of five breast imaging radiologists with a focus in education and an educational health care leader used a 6-step process, based on a double Delphi consensus technique to develop a validated list of 5 EPA-BRs. Our work was funded by an Education Grant awarded to lead investigator, Dr. Monica Sheth, through the Radiologic Society of North America Research & Education Foundation.

Access to Resources:

IMPORTANT

There are a number of links throughout this document to resources from organizations such as **RSNA, ACR, ARRS and their respective journals**. In most instances, residents receive free membership from these associations and can access this information at no charge. If you click on a **link and are denied access**, please contact the association directly for assistance.

Creators of EPA-BRs:

Monica Sheth, MD

(Lead Investigator)
Associate Professor of Radiology
NYU Langone Health
NYU Winthrop Hospital,
NYU School of Medicine

Petra Lewis, MBBS, MPH

(Project mentor)
Professor of Radiology
Vice Chair of Education, Dartmouth-Hitchcock
Medical Center, Geisel School of Medicine at
Dartmouth

Alice Fornari Edd, RDN

(Project Mentor)
Assistant Vice President of Faculty Development,
Northwell Health, Associate Dean of Educational
Skills Development, Hofstra Northwell School of
Medicine

Priscilla Slanetz, MD, MPH

(Collaborator)
Professor of Radiology, Vice Chair of
Academic Affairs, Associate Program
Director Radiology Residency, Boston University
Medical Center, BU School of Medicine

Katherine Klein, MD

(Collaborator)
Associate Professor of Radiology, Associate
Director, Radiology Medical Student Education,
University of Michigan Health System

Ryan Woods, MD, MPH

(Collaborator)
Assistant Professor of Radiology, Associate
Section Chief of Breast Imaging, University of
Wisconsin School of Medicine and Public Health

Acknowledgements:

I would like to thank the RSNA Research & Education Foundation for funding this important educational research and Dr. Michael P. Recht and Dr. Nancy Fefferman from the Department of Radiology at NYU Langone Health and Dr. Jason Naidich from Northwell Health North Shore-Long Island Jewish Hospital for supporting my time and vision to develop this educational tool. Additionally, I would like to thank my project mentors, Dr. Petra Lewis and Dr. Alice Fornari, and grant collaborators for their assistance and guidance throughout this endeavor, as well as Dr. Olle ten Cate, Professor of Medical Education and senior scientist at the Center for Research and Development of Education, University Medical Center Utrecht, the Netherlands, for providing assistance and expertise in EPA understanding and organization. -
Monica Sheth, MD

EPA2-BR Worksheet

<p>Title</p>	<p>Work-up and managing patients in the diagnostic imaging setting EPA2a: Mammographic and sonographic abnormalities in the asymptomatic patient (screening callbacks) EPA2b: Patients presenting with breast symptoms</p>
<p>Description of Activity</p> <p>2b. Symptomatic patients are patients who present with: a palpable breast mass, palpable axillary mass, breast pain, nipple discharge, nipple changes, inflamed breast. The patient population includes pregnant and lactating women, men, and children.</p>	<p>A breast imaging radiologist is able to work-up abnormalities detected on screening mammography and determine whether additional mammography or sonography, alone or in conjunction, may be indicated for evaluation. Similarly, when a patient presents with a breast symptom, a radiologist must be able to determine the appropriate sequence and type of imaging evaluation and when biopsy is necessary.</p> <p>Once diagnostic imaging is complete, the appropriate BIRADS assessment must be determined along with management. The physician must be able to clearly and effectively convey the results and recommendations to the referring clinician and patient, using layman's terms when appropriate to increase understanding without raising alarm. ^{27,28}</p> <p>The key functions which define this EPA include:</p> <ul style="list-style-type: none"> ● Determine which mammographic and/or sonographic views are indicated to evaluate an abnormal finding on screening mammography (technical recall, calcifications, asymmetry, focal asymmetry, mass, architectural distortion). ^{1-6, 7-13} ● Differentiate benign, probably benign, suspicious and malignant findings on mammography and sonography and determine appropriate management. ^{1-6, 7-13} ● Correlate ultrasound findings with screening mammography. ^{7,8,10-12} ● Understand age and gender appropriate sequential imaging work-up for a male or female presenting with a breast symptom(s) and how that differs if patient is pregnant or breastfeeding. Symptoms include: <ul style="list-style-type: none"> ○ Palpable breast or axillary mass ^{2,14} ○ Breast pain ¹⁶ ○ Nipple discharge & changes (recognize key history and clinical findings that suggest benign or malignant etiology) ¹⁷ ○ Inflamed breast ^{18, 20-23} ● Differentiate mammographic and sonographic findings that are benign, probably benign, suspicious and malignant, including but not limited to: <ul style="list-style-type: none"> ○ Inflammatory breast cancer from abscess ^{14,15,18} ○ Gynecomastia from male breast cancer ^{22, 24-26} ● Manage focal symptoms when there is no associated imaging finding ^{5,14} ● Recommend the appropriate modality for biopsy of suspicious findings ^{6,8,14,16,17,19,24} ● Identify when surgical referral is needed ⁶ ● Apply evidence based medicine to patient care ^{6,8,16,17,19,24}

	<ul style="list-style-type: none"> • Display professional and compassionate communication with the patient, ordering physician, and ancillary staff and document in medical record when appropriate ^{27,28} <p>Superscript indicate resources below which address the key function</p> <p>Context: outpatient imaging center Targeted transition point: third month rotation on breast imaging</p>

Entrustable Professional
Activities in Radiology
Training and Assessment

Monica Sheth, MD

@MonicaSheth

Associate Professor of Radiology
NYU Langone Health
NYU-Winthrop Hospital

Reforms in postgraduate medical education have revealed a gap between the theoretical aspects of competency-based training and real-world clinical practice. In 2007, Olle ten Cate proposed entrusted professional activities (EPAs) as a means of bridging this gap.

Learning Objectives

After this presentation, you will be able to:

- 1) Explain the concept of EPAs
- 2) Illustrate the relationship between EPAs, competencies and milestones
- 3) Summarize EPA assessment options

What is an Entrustable Professional Activity (EPA)?

Basic **skill** or **task**

Essential to the daily practice of medicine

EPA characteristics

- Executable within time frame
 - Observable
 - Measurable in process/outcome
- 
- Suitable for entrustment
 - Assessed as permission to do with certain level of supervision
 - Allocated to individuals

EPA Supervision Scale

A clinician can evaluate a trainees level of to perform a task:

Level 1: Observe a task

Level 2: Execute task with direct supervision

Level 3: Execute with reactive supervision

Level 4: Execute with supervision at distance

Level 5: Execute without supervision

Level 6: Provide supervision to juniors

* Goal prior to graduation

Once a trainee reaches level 4 or 5, an attending physician can **entrust** a trainee to independently perform a core activity, i.e. they are ready for unsupervised practice.

Why EPAs?

EPAs are practical. They define the actual activities a competent physician must perform in practice WHILE also integrating our current competency based training model.

How do EPAs differ from Competencies?

- EPAs are not an alternative to competencies BUT a means to translate competencies into clinical practice
- Competencies are descriptors of physicians; EPAs are descriptors of work
- EPAs require multiple competencies in an integrative, holistic manner
- The next slide will provide further insight into this difference

EPAs

Work descriptors

Essential task in professional practice

Discharge patient
Counsel Patient
Lead Family Meeting
Design treatment plan
Insert central line
Resuscitate patient

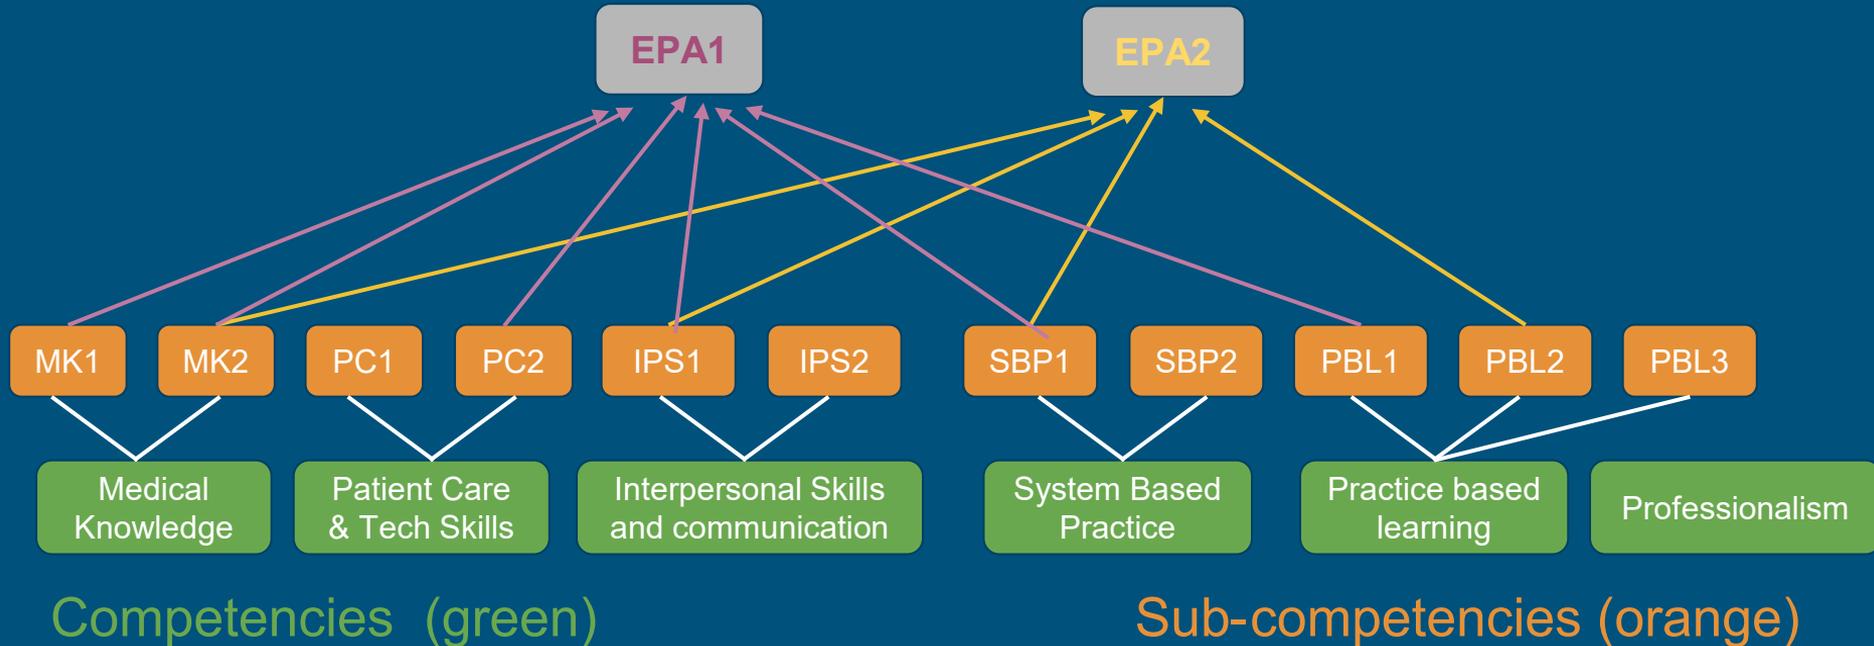

Competencies

Person Descriptors

Knowledge, skills, attitudes, values

Content expertise
Health system knowledge
Communication ability
Management ability
Professional attitude
Scholarly skills

EPAs are linked to ≥ 1 appropriate ACGME **competencies** & **sub-competencies** that are required for its successful completion.

Milestones

- A residents' performance of each **sub-competency** is measured by ACGME **milestones** (level 1 → 5)
- Level 1 (demonstrates some education in radiology) to Level 5 (advanced beyond performance targets).
- Milestone levels are very similar to EPA supervision levels.

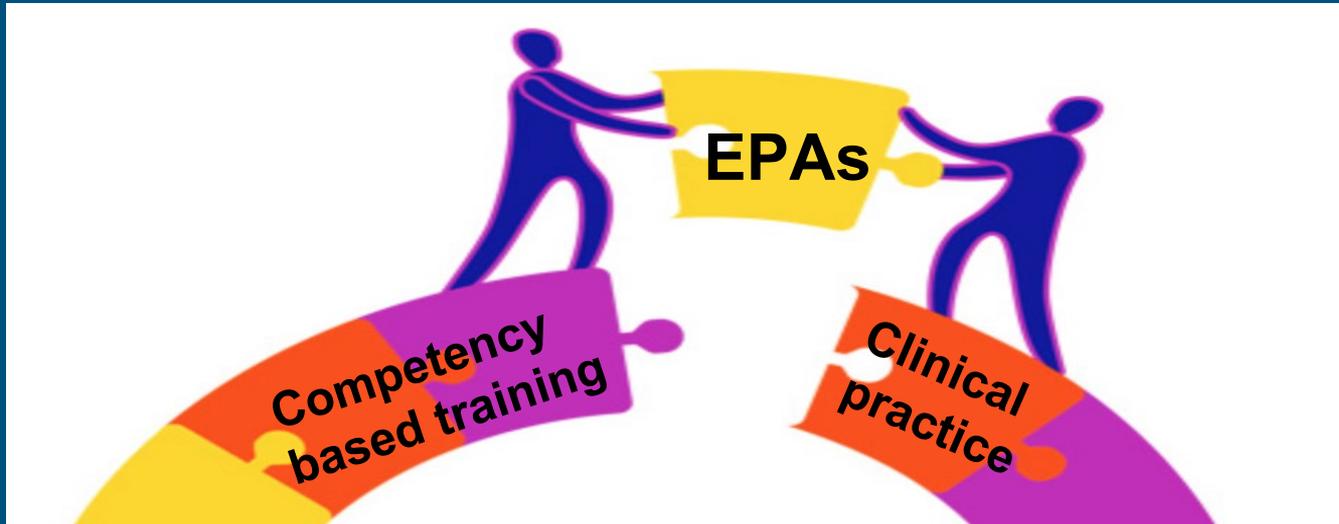

How to milestones fit in?

When a trainee is observed to reach supervision level 3 for an EPA, it is similar to reaching milestone 3 for each subcompetency linked to the EPA.

Thus successful execution of an EPA infers successful attainment of associated competencies & subcompetencies, providing a larger more practical picture of a trainees abilities.

EPAs Bridge the gap

- EPAs frame competencies into a clinical context and bridge the theoretical gap between competency based training and clinical practice.

Assessment tools for Entrustment Decisions

Multifactorial:

- **Electronic simulation knowledge test:** e.g. RadExam, Core, ACR DXIT
- **Short practice observations:** 5-15 minute snapshot with feedback (procedures, presentation, read out)
- **Case-based discussions:** 5-15 minute informal mini-exam after encounter or procedure (“what if the patient...” “what if the images would have shown...”)
- **Long-practice observation:** during weeks/months on rotation, building view on professionalism and behavior

Statement of Awarded Responsibility (STAR)

When a trainee reaches an EPA entrustment level:

- It acknowledges a formal moment of competence
- Reflects a trainee's ability
- Gives them the right and duty to enact EPA with less (or no) supervision (institutionally dependent)

Summary: EPAs

- Focus on observed competence
- Practical way to ensure a trainee to ready for clinical practice
- Incorporate 1 or more competencies and sub-competencies
- Have similar levels to milestones
- Need multi-factorial means for assessment
- Awarded to a trainee
