Literature Review:

Pros

Patients:

- Increases understanding of radiology
- Improves understanding of disease
- Enjoy reviewing images with “imaging expert”
- Decrease anxiety

Radiologist:

- Decrease Burnout
- Resident Education
- Added value

Cons

Patients:

- Want result from “their” doctors

Radiologist:

- Removes radiologist from revenue-generating activities
- Unclear reimbursement and compensation
- Lack full clinical picture to answer questions

Plan: Increase radiologists' visibility and value

1. Install PACS in Mount Sinai Pulmonary fellows clinic consultation room
2. Radiology fellows and senior residents conduct one-on-one patient encounters to review imaging
3. Pre and post imaging surveys assess patient understanding of imaging results, anxiety, willingness to stop smoking, and the role of the radiologist
4. Medical students survey control group: Patients who only saw pulmonology

Grant \$ was used to purchase IPADS for patient surveys...

Patients struggled with the technology and pen and paper method was implemented

Materials Needed

Computer/ workspace already present in pulmonary clinic
PACS was installed on a standard computer
EMR can also be used for image review

Workspace

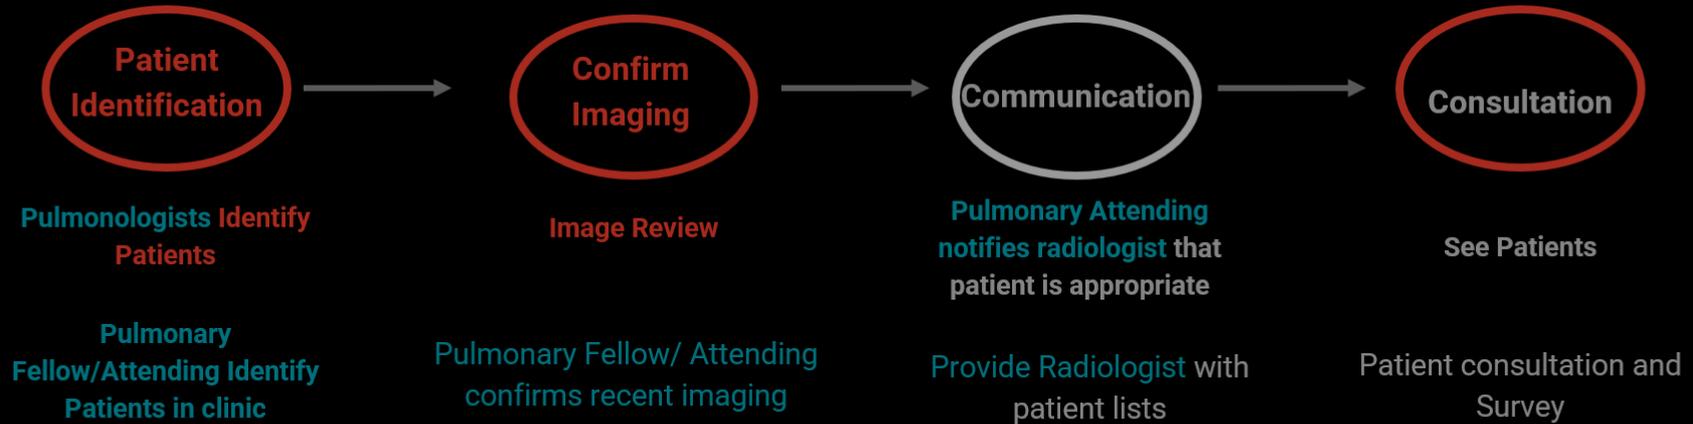

Computer

PACS

Cost= \$0

FINAL Proposed Workflow:

Pulmonology teams identified patients with recent imaging

Patient Demographics: 84 patients

	Imaging Review n=48	Control Group n=36
Mean Age (SD)	57 (11.9)	54 (15.6)
Gender		
Female	34	20
Male	14	16
Race		
White	6	3
Asian	2	2
African American	9	8
Other	31	23
Ethnicity		
Hispanic	28	10
Non hispanic	20	26
Primary Language		
English	40	30
Spanish	7	5
Other	1	1

Other Imaging Findings:

Cystic lung disease

Malignancy

Pulmonary Embolism

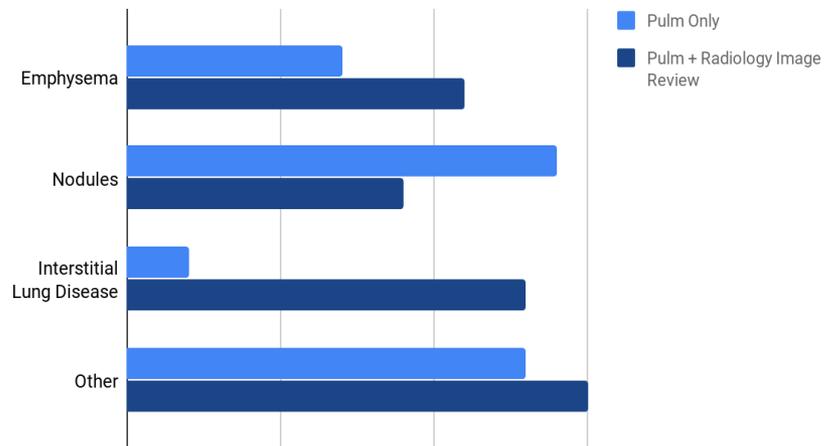

Bronchiolitis/ Atypical mycobacterial infection

Pneumonia

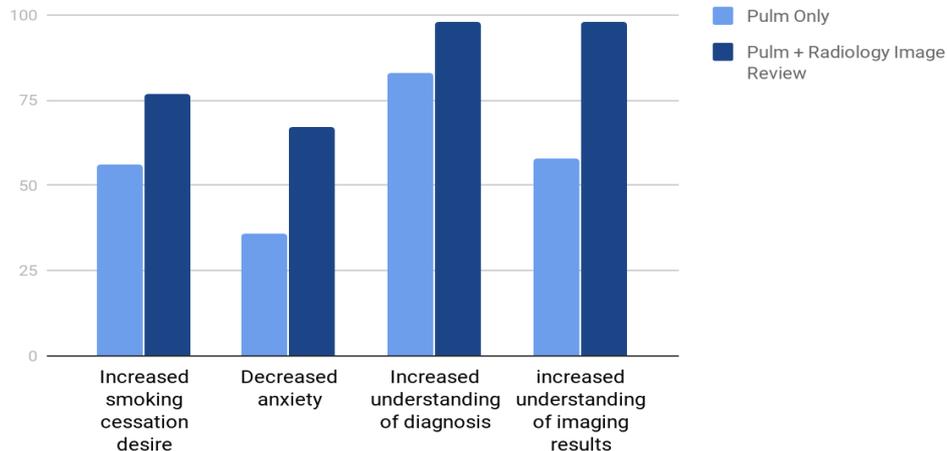

Pre Survey: 21/48 (44%) Image review and 10/36 (28%) pulmonary control patients did not know their CT scan results

pulmonary control patients did not know their CT scan results

CT Findings

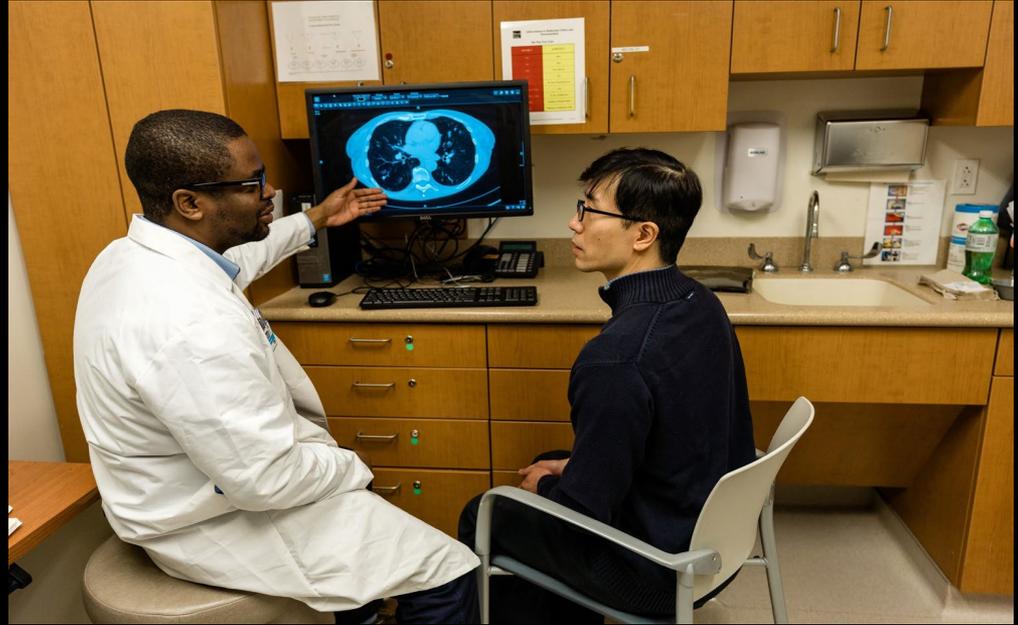

Post Surveys

Radiologists?

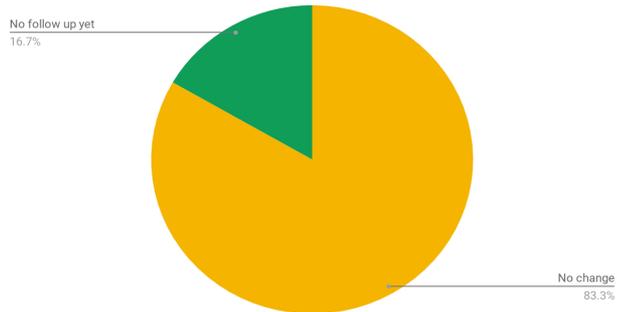

- 14/36 (39%) control (only pulm) patients identified radiologists as physicians
- Pre image review, 34/48 (71%) identified radiologists as physicians, increasing to 90% post image review

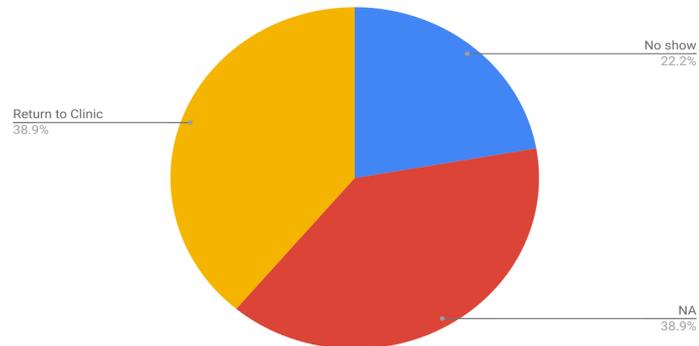

95% wanted to meet with a radiologist again to review future imaging
100% found meeting with a radiologist helpful

Results

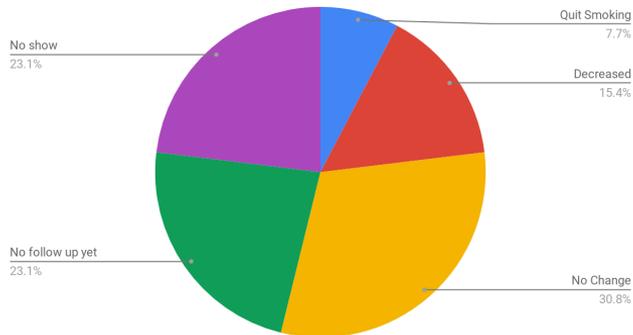

Smoking Cessation: Pulm only

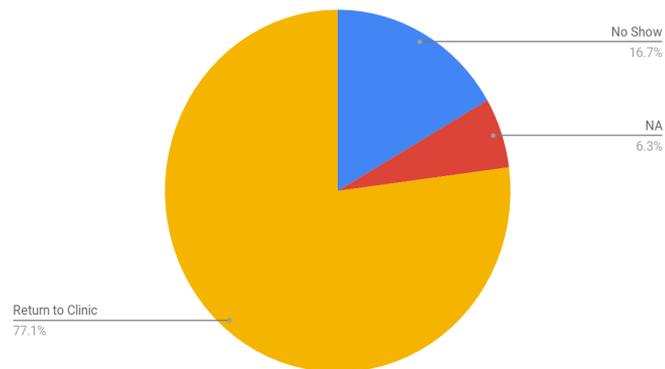

No Show: Pulmonary Visit

Smoking Cessation: Pulm+ Image Review

No Show: Radiology Consultation

Conclusions

- Many Patients are unaware of or do not understand their CT scan results
- After meeting with a radiologist patients have:
 - Better understanding of imaging finding
 - Improved understanding of radiologists' role
 - Increased desire to stop smoking

Next Steps

- EMR Video Visits
- Screen share images with patients and consult virtually
- Documentation of visit in EMR
