

Seeding the Future of Radiology

2018 RSNA R&E Foundation

GRANTS & AWARDS

Read full grant abstracts and see how R&E Foundation grant recipients are making a difference at [RSNA.org/Grant_Search](https://www.rsna.org/Grant_Search)

2018

As the RSNA Research & Education Foundation embarks on another year of funding radiology's future, we would like to take a moment to express our sincerest gratitude to our donors.

Thank you for your commitment to seeding the future of the specialty. Thank you for understanding that the seeds of innovation we plant today will yield improved patient care in the seasons to come.

In short, thank you for making what we do possible.

In 2018, the Foundation's Board of Trustees approved grant funding of \$4 million for over 100 projects. This level of support is only possible because of your generosity.

Your contributions ensure these talented investigators and educators can begin their research journeys with a strong funding partner and the support of the entire radiologic community.

But remember, the money we give is an investment in the future of radiology.

A survey of past R&E grant recipients shows that for every \$1 granted by the Foundation, recipients receive an additional \$50 in funding as principal investigator or co-investigator from sources such as the NIH. Now, that's a tremendous return on your investment.

We are delighted you've made a commitment to be part of that future by helping plant the seeds for radiology's tomorrow.

We hope you continue to be a part of this journey to find out what the future holds for radiology.

A handwritten signature in black ink that reads 'N. Reed Dunnick, MD'. The signature is fluid and cursive.

Sincerely,
N. Reed Dunnick, MD
Chair, R&E Foundation
Board of Trustees

GRANT AND AWARD DESCRIPTIONS

RESEARCH SCHOLAR GRANT

Our premier career development grant transitions junior faculty to independent investigators. Funding protects research time to conduct complex projects under the guidance of a mentor and scientific advisor in preparation for NIH funding. Two-year grant of \$150,000.

RESEARCH RESIDENT/FELLOW GRANT

This grant provides investigators a chance to explore powerful ideas. Working alongside an experienced advisor, trainees gain insight into specific investigation and practice research methods and techniques; it is a catalyst to pursue research at a critical point in a radiologist's career. One-year grant of \$30,000 to \$50,000.

EDUCATION SCHOLAR GRANT

Innovation in education can transform the way radiologists learn, understand and care for patients. This grant encourages development of new methods of teaching and evaluation and enables effective delivery for lifelong learning. One-year grant of up to \$75,000.

RESEARCH SEED GRANT

Every great discovery starts with a spark. This grant provides seed money to test hypotheses and conduct pilot studies in preparation for major grant applications to corporations, foundations and government agencies. One-year grant of up to \$40,000.

RESEARCH MEDICAL STUDENT GRANT

Exposure to radiology research in medical schools ignites a passion for the specialty. With support of the community and a network of mentors, a summer project can turn into a career-long pursuit of research and discovery. Grant of \$3,000, matched by the sponsoring department.

RSNA/AUR/APDR/SCARD RADIOLOGY EDUCATION RESEARCH DEVELOPMENT GRANT

This grant helps to build a critical mass of radiology education researchers and promotes the careers of those with passion to advance the science of radiology education around the world. One year grant of up to \$10,000.

RECOGNITION AND THANKS

Through the generosity of our donors, the RSNA R&E Foundation is able to continue its investment in R&D for radiology.

The Foundation acknowledges the distinguished individuals and the Visionaries in Practice (VIP) program donors who have established endowments and awards in their names or in the names of those honored.

GE Healthcare

RESEARCH SCHOLAR GRANT

Mai-Lan Ho, MD will investigate zero echo time MRI for radiation-free pediatric bone imaging

“The RSNA Research Scholar Grant is an extraordinary opportunity for me to develop Zero Echo Time (ZTE) MRI for radiation-free cortical bone imaging. This novel technology will drastically decrease pediatric radiation exposure and help improve care for children across the world. Through this research, I have found so many opportunities to form uniquely positive collaborations among radiologists, physicists, and clinicians – which makes a visionary goal like this possible.”

RESEARCH SEED GRANT

Laura Heacock, MD, MS (left) with scientific advisors Linda Moy, MD (center) and S. Gene Kim, PhD (right) will investigate the use of a high temporal resolution compressed sensing MRI sequence in abbreviated breast MRI (AB-MRI).

Laura Heacock, MD, MS, will investigate the use of a fast temporal resolution compressed sensing MRI sequence in an abbreviated breast MRI (AB-MRI) screening protocol.

“Incorporating fast temporal resolution imaging may improve the specificity of AB-MRI examination by providing quantitative information on the wash-in of gadolinium. Use of this imaging technique in AB-MRI could therefore increase breast MRI screening accessibility, particularly for intermediate-risk women.”

RESEARCH RESIDENT/ FELLOW GRANT

Praveen Ranganath, MD is investigating a novel dual-layer spectral CT technique in characterizing coronary artery calcium from coronary CT angiography data.

“Although we know that coronary calcium is strongly correlated with coronary artery disease morbidity and mortality, current imaging techniques in characterizing coronary calcium are rudimentary. We aim to evaluate a novel spectral CT technique called ‘spectral CT fingerprinting’ in coronary calcium characterization. We hope that this technique will complement the current armamentarium in coronary artery disease diagnostics and prognostics.”

RESEARCH MEDICAL STUDENT GRANT

Chloe Genevieve Cross, BSc will investigate the quantification of blood spinal cord barrier openings after the application of magnetic resonance guided focused ultrasound

“As a first-year medical student, I would like to pursue interventional radiology as a potential specialty – the RNSA research project aligns with my goal as focused ultrasound is an exciting clinical application of interventional radiology techniques. We will investigate quantification methods to assess the permeability of the blood-spinal cord barrier opening after MRgFUS in rodents. This model will allow us to further optimize the potential use of MRgFUS in the treatment of spinal cord injury in humans.”

EDUCATION SCHOLAR GRANT

RSNA Education Scholar Grant recipient, shown here visiting a Ugandan traditional healer to study remedies women receive for breast problems.

Despite strides in cancer-control planning by the Ugandan government, including access to free treatment, outcomes for breast cancer patients remain poor. This is in part attributable to delays in diagnosis, ranging from women's lack of knowledge to suboptimal referral systems – factors that lead to late-stage diagnoses, when treatment is less effective.

“The RSNA-funded study will allow me to identify health system delays in breast cancer diagnosis in Uganda and use a 4-level educational strategy with stakeholders to develop a plan to reduce late-stage diagnosis. This project contributes to the long-term effort in Uganda to reduce breast cancer mortality.”

ROENTGEN AWARDS

Roentgen Resident/Fellow Research Award recipient Byung Chul Yoon, MD, PhD (right) with Radiology Residency Program Director Payam Massaband, MD of Stanford University.

“One of the greatest lessons I have learned from my research experience has been the importance of collaboration. When I first started doing research, my impression of a researcher was someone who worked alone. After all, my undergraduate course in research was called an ‘independent study.’ As I started doing more research, however, I realized that nearly every project requires a team of people. In fact, all of my research projects during residency have involved colleagues outside radiology including surgery, biostatistics, computer science, and engineering. I would encourage others thinking about doing research to keep an open mind and communication with other fields in medicine and science.”
