For Immediate Release

RSNA launches new product—*Radiology Select*, a continuing series of topical collections of selected *Radiology* articles

Highlights developments in imaging science, technology, and clinical practice.

(OAK BROOK, Ill.) March 6, 2012—The Radiological Society of North America (RSNA) has launched *Radiology Select* (rsna.org/radiologyselect), a collection of *Radiology* articles focusing on a specific subspecialty topic.

Radiology Select will be published bi-annually and will feature 20 to 35 *Radiology* articles personally selected by one or more guest editors to form a comprehensive portfolio of articles on the science of imaging in specific diseases and its relation to clinical practice.

Deborah Levine, M.D., senior deputy editor of *Radiology*, serves as the overall series editor for *Radiology Select*.

“These collections of key articles on areas of important research development will help readers understand the relationship between articles and allow them to follow the development of trends in research and clinical care over time,” said Herbert Y. Kressel, M.D., editor of *Radiology*.

Radiology Select will be offered, for a fee, to both RSNA members and non-member individuals.

Each collection will be offered in three formats—print, online and digital tablet—and offer a robust educational component providing up-to-date self-assessment module (SAM) and continuing medical education (CME) opportunities for readers.

“In addition to providing readers with an understanding of the evolution of imaging research and its translation into clinical practice, *Radiology Select* will assist them with maintenance of certification,” Dr. Kressel said.

Radiology Select will also feature article author commentaries and conversations, podcasts and videos in select formats.

The first volume, focusing on pulmonary nodules, includes 32 articles that cover the spectrum of lung nodule imaging and provides the opportunity to obtain up to 10 self-assessment module (SAM) and 15 CME credits with the online version. Alexander A. Bankier, M.D., Heber MacMahon, M.B., B.Ch., and David Naidich, M.D., serve as the guest editors for the first volume.

“We believe that *Radiology* Select will appeal to both the radiologists and clinicians who want to develop an in-depth understanding of important areas of research in imaging,” Dr. Kressel said. “We also think these volumes will prove to be a great educational value to our readers.”

For more information on *Radiology* Select or to order, please contact RSNA Subscription Services at (630) 590-7770 or visit rsna.org/radiologysselect.

###

Published regularly since 1923, *Radiology* has long been recognized as the authoritative reference for the most current, clinically relevant and highest quality research in the field of radiology. *Radiology's* 6.066 impact factor is the highest of any general diagnostic radiology journal. It is also the most cited journal in the field, with nearly double the number of citations of the closest competitors.

RSNA is an association of more than 48,000 radiologists, radiation oncologists, medical physicists and related scientists committed to excellence in patient care through education and research. The Society is based in Oak Brook, Ill. (RSNA.org)
